| | |
|---|---|
| **Useful** | The app bridges a massive gap in the travel market by turning passive sightseeing into an active, managed experience. It isn't just a tour guiding tool; it solves the real problems of "what do we do when we get there?" and entertainment (gamified experience, missions, audio guides) with translating this experience to offers and gifts that makes the user benefit more from his tour. |
| **usable** | Exploring in a new governorate can be overwhelming. By translating complex city navigation into a familiar, step-by-step "game map" , the entire travel flow becomes intuitive. The user doesn't have to overthink their trip; they just follow the checkpoints and enjoy the ride. |
| **Findable** | The app relies heavily on contextual, location-aware design. Whether a user is searching for a nearby monument, a local photographer, or their next mission, the architecture ensures that the right information finds the user exactly when and where they need it, minimizing search friction in addition to easy reach to app installation and service website. |
| **Credible** | Trust is built into the app's DNA through community validation. By allowing users to rate locations, review local guides, and ask questions on a community board, the platform proves its reliability. Tourists know they are getting authentic, peer-reviewed experiences. |
| **Accessible** | The product caters to a wide spectrum of users and contexts. It supports different travel styles (solo vs. group), and physical contexts (using audio storytelling so users don't have to struggle reading a screen under the bright Egyptian sun). |
| **Desirable** | Blending Egypt's rich history with game mechanics and tangible rewards creates a highly addictive and emotionally engaging experience. Users won't just use the app because they have to (like a standard map); they will use it because it is genuinely fun, competitive, and brings history to life. |
| **Valuable** | The entire ecosystem creates a continuous "win-win" loop. Tourists receive an unforgettable, hassle-free adventure with tangible financial rewards (the Waffarha-style points), while the app generates revenue through service commissions and drives foot traffic to local Egyptian businesses and historical sites. |
